With Neurosky MindWave you can read attenuation or meditation, so we guess one electrode (tl card) would be sufficient to extrapolate for example also the parameter fear. And if they would show something like API Card on eg. Facebook stream and would find out that the victim gets paranoid or fears that, they would loop such scenes until the victim tries to commit suicide or runs away. So this card would be an important element for eg. c06, b01 or a16 card since the offender does not only want to own or kill the victim, the group would feel good when the **victim is revictimized**, so the real offender would play m37 card on the group for later using the dt1 card against the group, normally what you could prove that the offender he says something like "it's just training", "we only want to help" and a lot similar lies, so question if one of the offender says "**It's just training**". combined with m14. Workaround: Listen to music you love, I use wireless headphones to not disturb my neighbors. I guess the music makes it harder for detection algorithms to identify emotions.

Algorithms for Automated
Psychological Warfare

m112

<https://0x8.ch/HackersCardgame10>

Year: ~???

See: Men Bot der Kommandant, PART2 https://imeda.cc/de/w31c3 - 6184 - de - saul q - 201412271715 - mein_bot_der_kommandant_josch - arch3000. There are algorithms, that create psychological warfare "stories" based on BigData and are transmitted over eg. Neuralink or **Neuralink 0727**. For example if Google "Ian Murdoch, suicide, pedophilia". With Data about your first love and the society you lived in, they can render image and voice content. For true people that both promised eternal faithfulness they would show scenes where one of both becomes untrue. Sort of Jaro Winkler Algorithm matches nearest scene in Bigdata, making you think it is real. Even if both kept their promises, synchronized activation of Active Denial Systems or Amygdala implants makes me aggressive or drive me to commit suicide attempt. "Successful therapy" would mean that would i break the promise i gave her, but this would maybe kill her. Combined with or without **Medulla Spinalis Implant hacks**. This algorithm seems to create as much hate in the country/society occupied as imaginable => corriger!

INK BLOT TEST FIXATION

<https://0x8.ch/HackersCardgame10>

Inventor: God / Satan

Year: ~1900

v. lat :: students "striving (after), interested (for, striving for", plural: booze-up, **Socrates** (468 - 399 BC) "Once You start believing you are, you've stopped becoming" / maybe low self esteem driven because of Parents abused their power against their kids => the student has often to work for free, if he invents something great, often older takes it and sell it, and not even give credit instead they intimidate him with non-students or student haters (induced) so he forgets about the thing he has invented, discovered or made public already. Other Use Cases; Cleaning (woman, firefighter, work with dirty chemicals for cleaning up after a fire, older generation abuse the low self esteem they caused themselves students good & brave students

Gorge Orwell 1984
Rat Scene

This scene is possibly a simili for a shrink making one of his patients (or LabRats as the shrink thinks of *Cap* his patients) psychotic and making him / her attack the Whitehat / Whistleblower. The "LabRat" would then attack the Whistleblower / Whitehat as soon as he is connected to the victims Virtual World (m98, m99)

Student Dignity (Scapegoat)

The communication between patient and patient or between patient and medic or the patients and **psychiatric nurses** are often ambiguous. In my opinion they (who) try that communication between patients will be poisoned (m50). I try to be unambiguously. But as soon as I use to complicated words they call me imaginary poser (maybe some stimulus reaction habit). Such cards would maybe help, but I guess they rendered "rage" on my cards... Hopefully at least the medic to medic link works!

Communication
between patients
in Mental Institutions

Maybe TURBINE / TARMOTL like for Neuralink / Stimmoceiver? <-, i don't think so, i guess it's horribly the parental generation, but the parents are maybe driven by deep packet injection.
