

## M-Com-Station

t25

Year: ~????

Inventor: xxxxx

Since 1950s are things like Stimoceiver (t1 card), so there must be a device that transmits and receives the signal from the Stimoceiver, or 70 Years later it would be something like Neuralink (Elon Musk's Company). If the keys of an persons Neuralink would have been hacked or leaked, the person with the key and the strongest M-Com-Station could force the person do things he otherwise would not do (wrist case at t1 card) if the Implant has even the ability to dissociate that person so that the person does not remember anything (you could call that Hypnosis) it would be stupid to sentence only the "Bot". Even if the "Bot" confessed that he has done the crime, case is not yet over. The person who owns the strongest M-Com-Station would still be free and maybe planning the next, murder, rape, amok... But in the real world, it would maybe look more than t26 card, tnx **BFB2 Honeypot**

## Active Denial System

t18

Inventor: US Air Force

Year: ~1980

The Active Denial System rewards the top layer of the skin at a distance of 500m. For a range of 5 m logically more than 100 x smaller, small enough to fit in a cell phone. Actually, 1930s election tube technology, but today you can do this also with semiconductors (Esaki-Tunnel diode). Maybe one could do the same thing directly in the CPU. With Army-Grade Crypto, since the radiation power reduces to the square of the distance, it would be quite small. The "Active Denial System" - denialist would thus be the natural arch nemesis of a TinFoil-Hat.

At a range of 500m one could terrorize lodger and if it would have been coupled with the victims computer and there are additional some algorithms one could drive the victim insane, drive to commit suicide or make it even run amok. See cars: t1, t10, t12, a16, a1, b1, e1, e5, m13, m19, m32, m46, m47

## Skinner Box

t2

Inventor: B. F. Skinner

Year: ~1960

Over electrodes on the floor he could give the mouse aversion  $\ominus$ . By pressing the Button the mouse was rewarded with a biscuit = punishment / create aversion  $\ominus$ . By searching for sequences of incentives and punishment, to completely remote-control test-object" caused long-term damage. If you are being subject to such experiments talk about the details with equal aged people you trust. If you tell eg the Police they just diagnose you eg Schizophrenic and would put you in a mental institution where historically a lot of such illegal human experiments were made, eg. Burghölzli, I guess today (2019) the abuse refugees? #VerdingKinder, #SchwabenKinder, not loved Childrend (often the oldest male), Soldiers, ... generally people nobody cares about, we as a society should act and leak what we know about.

## EventTrigger

Inventor: ??????

Year: ~????

Specific Events can trigger Actions. GPS Data, Data from acceleration sensors in handles (for example specific roller coaster) Events could be Sounds, turning on Light-Switch (mayneed evaluated by smartmeter and the a list of what device uses how many watts), images, Automatic Behavior Recognition, websites (urls), Buttons or Mouse gestures on a computer. Handy or even if you draw a circle with your hand in the air. One can recognize events with AI (Pattern Recognition, Deep Learning,...)

For Example if fürg S., would have fired illegally with a weapon, this event would have been recorded and caused an event in a Gummirelocator system [1]. Concerning Urs B. (statement not verified yet) are the 1960s those who programmed the triggers against marc jr landolt, after they programmed those triggers they run in auto-pilot mode and they cant delete it (auto-pilot = allegation)

## Classical conditioning

t17

Inventor: Ivan Petrovitsch Pavlov

Year: ~1905

With a golden wire / metallic substance that was injected into my throat they contract my muscles (possibly radio waves) that makes me paranoid. At the same time they loop the sentences "you have Cancer", "it's because you smoke", "it's just to keep you save", "it's just a game". That confuses / depresses me. BDSM toy materializes later, possibly shields the radio waves, or revictimize me, or some sort of hint in case i would die. Coping Strategy would be, if you think that it is just some sexual game, but in fact it is illegal torture to silence whistleblowers / Whitenight Hackers. Since i'm interested in the truth i am maybe on the right way to find those old people that destroyed so many lives. Unsure if this could be induced also by something like t1 or t6 card I guess they use EEG legit t1 Card return channel to find out, if it succeeds destabilizing my psyche. They dont do peaks or spikes, otherwise it would be clear that it is electronically induced, if they do a crescendo over several hours it really sucks. Additional there is a **phooey saliva mod**, if you have permanently blood in you saliva visit a doctor!

## Crime Scene 3D Scanner

t38

Inventor: ????

Year: ????

If Jurisdictions use 3D Models for surveillance of accused people one should check the device and the supplier. If NSA/CIA uses Scapegoats for things they have done they would suggest local Jurisdictions to do this sort of surveillance, but the device and infrastructure would be owned by the CIA/NSA to make the local Jurisdiction believe that the Scapegoat is really the criminal. First Problem would be that the real criminal is still free and planning maybe already the next Crime and secondly the Scapegoat would then driven to commit suicide and the Jurisdiction could only say: "it is fair that the Criminal died" but they would know that m37 -> dt1 Card.

## Hardware Synthesizer Sampler

t9

Inventor: Firma Fairlight CMI

Year: ~1970

To record and play sounds digitally (cards: c02, t10, t12) You can change pitch, bass, trebles, snip single words and glue them together like you want. It is also possible to use other mathematical models, e.g. Fourier analysis/transform to analyse the samples or to modify them. Simplest variant, if you play twice the same with delay of 0.2 seconds to achieve an echo effect. If you create physical models of human voice you could even fade between 2 different voices (see t21 card) To make music, manipulate voice recordings prior to negotiation, behavioral sciences, e.g. The "Pavlovian Dog" experiment... but also a very cool kids toy.

## Cyber choking chain

t9

Inventor: ????

Year: ????

With a golden wire / metallic substance that was injected into my throat they contract my muscles (possibly radio waves) that makes me paranoid. At the same time they loop the sentences "you have Cancer", "it's because you smoke", "it's just to keep you save", "it's just a game". That confuses / depresses me.
