

**the sum of
psychological keys
is constant**

<https://0x8.ch/HackersCardgame10>

Inventor: xxxxx
Year: ~????

In Swiss Law the Article STGB 185 should prevent that captors own and enslave people. The Article also should prohibit that people are owned with psychological tricks. Trauma that are theraped can not be used anymore to make eg. young people do what the older people wants them to do. Trauma seem to be activated by an order of images, voices... they can be theraped, but if the Schizoprophic Person that is in some cases a victim of an STGB 185 is free (not as in free Beer) they seem to activate people that generate new similar scenes and the image or voice sequences that activated the trauma is "rendered". After the sequences are "rendered", the victim could again be triggered with the same keys, except he/she knows this dirty concept. 3 Months in a Mental institution renews all keys that should not exist at all. **After I released card PsyOP started loop "Marc Jr Parents are Pedophile..." to spam this information(s)...**

**the speaker is lying
(Stimulus-Reaction-Habit)**

Inventor: Carli Colloid
Year: -1883

With tons of bigdata you could easily say if someone is lying. Maybe there is already a system that does that function this to help parents to teach their children well. This would need some Algorithms and some technology cards and of course some programming language like Prolog. After a while the parents would trust into this stimuli and if the oldes kid would say, the system is lying but the stimulus that was trained in the parents head says **this is a lie**, the system **does not lie**, the parents would believe that the system is broken or that the system is intentionally lying. Maybe it's a common problem among Whitehat Hackers. But it became easier since good people like Manning or Snowden provided us with proof. What if **Schizophrenic** People have the same Problem, or at least some of them. **Workaround:** switch from **Inductive reasoning** to **Deductive reasoning**

**CIA/NSA seeds
Information(s)**

<https://0x8.ch/HackersCardgame10>

Inventor: xxxxx
Year: ~????

The NSA / CIA leaks stuff himself. But not the whole story, only a part. For example Equation Group Malware (e6 card) or Carnivore "Software" (c03 card). They use that as some sort of HoneyPot to find out what people know about that sort of stuff. If one tweets additional things (even if it are only hypothetical things) they put him into a mental institution and erase his brain with "anti" psychotics. In the hope all people would not talk about that anymore. This should make him & them make fear the stupidity um power of the Secret Services. If a person would be autistic, then this would not really help, because questions must be answered.

Morality

<https://0x8.ch/HackersCardgame10>

Inventor: xxxxx
Year: ~????

Morality generally refers to the actual action patterns, conventions, rules or principles of individual individuals, groups or cultures. It would be better to say norms, values, categorical imperatives, which serve the general public as well as the individual, the counterpart to egoism.
To keep the system stable and create sufficient reserves, so that it does not break, if something small goes wrong and / or become Sodom & Gomorra (Hebrew נִינְיָה).
