With stimulus-response habits, for example if you get always a reward (m8 - see also card b1, b2, b3, t1...) and after 1000 repetitions you would get punishment instead of a reward (m7) they can induce rage. Or if a person invests a lot of time in a game and then would be banned forever from the Game / more worse if was an unfair decision) this can induce rage. If one has something like a working spinal cord implant that protects him/her then such psychological attacks could not kill, but if the spinal cords is hacked people can be killed without Psychological Warfare / Cognitive Dissonances. Such Software can produce people that run amok or suicide. You can not only blame the remote Controlled Person. Try to find both the remote controlled BOT and the person developed that interface or Server or abuses it. https://marcandolt.ch/mil_buzzernet/2016/04/25/vorstufe-zu-breivik/

With Vectors and Matrices you can calculate Networks. For example this image is from an app that is not allowed anymore on facebook. It could extrapolate all my social groups in Aarau. I was part of Primary School Küttigen (color 1), Bezirksschule Aarau (color 2), Boy & Girl Scouts Aarau (color 3), (color 4). And this information was generated only from the interconnections (metadata) between the things (see a12 card) not even from the things people posted. If you would add Natural Language Processing (see a20 Card) and eg. some sort of Mayer-Briggs or Big5 Psychology test, you could generate quite good personalized Suicide Death Bots : (see card a16), counter measure, warn the people that some criminal people/agens did and do such things to me and are doing such things also to other young people.

As a kid I pirated lot of Software / Music / Movies. So they blackmail me with that sin until i relicensed everything. As far as I know i relicensed "Monkey Island 1" and/or "Doom 1" about three times. After they could not blackmail me anymore with piracy they began to blackmail me with things like "you've just been raped" or "you've just been raped under hypnosis" after all, i should not have relicensed all, because you maybe feel bad about things you 'stole' or copied, but the other things drove me into hundreds of suicide attempts. Additionally if you have proof for real crime or even murderer and the accused would use this NSA/CIA dataset to blackmail you, as long as you dissociate because of your piracy sins he will dissociate you but not kill you, unfortunately i relicensed almost everything. But one good thing in relicensing things you pirated eg with 6 Years is, that the records maybe help to remember childhood scenes.

If one would add a device to a webcam that can cause lot of PAIN (for example with sound above 120dB or with an implant or Active Denial System) one would not see the cam anymore after a while. This would be some sort of Skinner Box or classical conditioning (t2, t11) and maybe cards t10, t14, t15, t32, t33, m38, m26, end1, e1, e2, e3, e4. Involved. The cam would become invisible for the poor LabRat. Maybe you could hide even specific images shown to your computer. So this would maybe the real reason why Pinky & Brain never wins. If you feel PAIN since 17 years one could begin to ignore that there are invisible things. This (i guess i'm a bit Autistic) would be an invitation to hack this sort of technology. And since I would be the Labrat it would be a self-experiment and therefore hacking that would be a lawful / legitime move. Not proven YET.

Some sort of brainchip to prevent people from thinking about their brainchip. Sinners are kicked with their sins, for all people that are not sinners there is some sort of state machine (c01 Card) that tries to obfuscate the people.

- 1. they raped verdingkids (compassion with victim)
- 2. they implanted booby traps into the body (fear)
- 3. cAPI in Bible verses (IMSERT): lie
- 4. suicide death bot
- 5. medull spinalis implant to death
- 6. they reconnect to the girl you love to distract you

If you download brain implants blueprints porn ends up in the same directory somehow
