Stanford prison "experiment" antagonizing situation / medication

m69

Inventor: XXXXX

Year: ~???

Overloading is possible in some programming languages. I use this as metaphor for one could also do with such a feature.

For example the above "WHY?" could mean:
I agree, I question everything even this "question Everything".

But you it could also mean:

Why should I care and question things, I want to become or stay an old fat hairy ugly inglorious pedophile person in programming for example the calling function would decide what "stream" on gets over an technology card, in real world you could implement that with RFID, HandyID, face recognition....

One can produce situations, where people are played off against each other. You could do this with drugs, for example giving one person chemicals that make happy and funny and the other person chemicals that make sad. Worst case both victims will begin to fight each other while both victims think that he or she does the right thing. Maybe such chemicals were involved in Stanford prison experiment, unsure. But with Technology cards (eg. t1...) you could possibly produce similar situations. Or, Nazi * jews... or with just showing good or bad Facebook content (Facebook experiment, see Internet). For example also to tell some people that the accused younger boy is guilty and therefore it would be "legitimate" that an older person takes his goods would create the same situation, the unjust decision is often in favour of the stronger like Urs B. that has weapons... Interface for Social-Psychology Design Patterns

m137

<https://0x8.ch/HackersCardgame10>

Inventor: XXXXX

The PsyOps seem to work in different Groups, one group tries to manipulate the Whistleblower or Whitehat, the other group seems to manipulate the family of the Whistleblower. They have touring complete avatars of all people you know, so it's quite hard to find out what is true communication(s) and what is simulation. Separation from his social system makes it more difficult. One move of my Shrink was to tell me to catch up on my past, and my father he told not to catch up with his past. So he can inject the word "catch up" to generate an antagonizing situation (m50). I guess technically there would be some interface between such two world-views, maybe some sort of crash detection that wants to crash people intentionally further research required.

with Neurosky MindWave you can read attenuation or meditation, so we guess one electrode (t1 card) would be sufficient to extrapolate for example also the parameter faith. This card was added after i leaked m57 Card... There seems to be an algorithm, that records what one is doing for example during a week, saves the good scenes and then tries to create a Suicide Death Bot with this inverted good scenes.

Additionally they seem to drop all connections from the victims t1 to other allies, so no-one could help.
Workaround: Listen to music you love. I use wireless headphones to not disturb my neighbors. I guess the music makes it harder for the detection algorithms to identify your emotions.

Limbic System Vulnerability

m15-mod

<https://0x8.ch/HackersCardgame10>

Inventor: Satan

Year: ~???

Since we are genetically still over 90% identical to our ancestors that were driven by the limbic system (Neandertals, Monkeys, RUST™-Bots) our brain is vulnerable eg. to fat food, sex, kids slides. This they used by advertising industry, but also "used" for example by tracking the book stores and who is buying an assembler book by the age of 14) and then those people ("possibly" shrinks) in question gave the parents of the autistic child intentionally false advice; said them things like "we should give them LSD to heal him" or "we should diagnose him Schizophrenia because \$pretext". In fact the technical system they don't want the people to know about would just activate b1 card as soon someone would talk about that, so the autistic person is "sane" if he does not warn the other people that the other people are betrayed by that system the "Architect" does not want the people talk about.

faith detection

After Family Bloom attracted me with a computer course (m75), after her daughter (m38, m33) took my heart, after they throw me out (m45), after they put me in a mental institution (m19), after I worked for 18 Years most of the time 16 not just 8 like normal people do, after they used me for many things as scapegoat (scg*), after they used me also as lab rat (t19, t11, t15)...

Thank you that you showed me who I really am, and if Claudine broke her promise, I think it would be completely ok to own the complete Kanton Argau with my blood, and please remember to throw my dead body into the garden of Blooms, Arau and please call the press, or the sunshine press to make a big story to force the people in Switzerland not to do such stupid things...

Intentionally diagnosing Schizophrenia instead of Autism

Soldiers of The One

m135

<https://0x8.ch/HackersCardgame10>

Inventor: XXXXX

Year: ~???

Autistic people tend to be gifted in electronics, computer stuff, computer science, algorithms... "maybe" some big intelligence agencies did not want people to find out what is going on. So they tried to find out early who is autistic (for example by tracking the book stores and who is buying an assembler book by the age of 14) and then those people ("possibly" shrinks) in question gave the parents of the autistic child intentionally false advice; said them things like "we should give them LSD to heal him" or "we should diagnose him Schizophrenia because \$pretext". In fact the technical system they don't want the people to know about would just activate b1 card as soon someone would talk about that, so the autistic person is "sane" if he does not warn the other people that the other people are betrayed by that system the "Architect" does not want the people talk about.

Automated Mindmap Generation with Image input and EEG return path

this is then used to create a personalized Suicide Death Bot then tries to match the same scene / archetype with my family
