Eg. the flat-earth theory is just stupid, or maybe just a parable for Terry Pratchett's discworld novels, which tries to explain small and big kids in an understandable way, how a social system "university" works, and that some people trying to steal the Boots of other magicians. Maybe it also describes how Mainframes (AIs) work, in this case the chained Octavo which contains 8 spells (access keys). Or e.g. The librarian (Google) who has been transformed into a monkey => see Google-Query: Porn

Maybe you should read Terrys Pratcheds work...

Borg Hive (Infection & bursts)

There is a scene in Star Trek, where the federation tries to find frequencies of the borg hive, i don't like Star Trek because it are Military Dressed Soldiers that promote hierarchical systems, but this is a good scene. So if you would imagin, that many people already had some implants like neuralink, that then the process to find a user would be some sort similar to that Star Trek scene. In real world it would maybe more complicated, since it would have a many to many relation. Many sources, many sinks. Simple domain model: If you would take analogue devices one could listen or easily inject things. For example if I would say: "I love you Claudine". Urs B. would inject "Sprengfallen gegen Marc Ir aktivieren". If he would do this with small bursts, different antennas it would be hard to deactivate that terrornetwork. A big Problem would also be, if there are backup systems that are 99.99999% of the time silent, eg implemented as Autonomous system (Software). Things concerning Tobias Moser (m37) seems to be such a backup trigger: API::Moser loop("Claudine betrayed you with moser" & t15...)

Seductive Coercion PART 1

As far as i could find out, the NSA/CIA try to seduce you with young children. They render them even into your bed, tell you that you can rape the younger girl now. If you are a person that keeps the promise you gave your first girl, you would stand up from your bed to prevent that scene. My co-worker at the ISP Zikner Sabrina L. was shown in my bed for having sex with me, but I immediately stood up and protocolled to my diary "Sabrian L. would like to cyber-rape me" and smoked a cigarette and did things not in context to sexual integrity. They changed my diary to "I want to cyber-rape Sabrina L." kicked me out of the job and put me in a mental institution. If I would have said yes, then they could play m134 card with "you consumed, so you it is legitimate that you are now the product", i could only find out because I did not. With this chess move they can easily drive uneducated people to kill an equal aged m37 -> d1. That was about that time where I began to ask questions if the former chief of ISP Zikner committed suicide because of NSA/CIA in ~2006

They always tell you: "it's a fair game", but in fact it is not. I worked ~20 Years in the first market (Swiss terminalogy for working in non-disabled market). The average wage in Switzerland is 65-910\$. So I should have about 1Mio \$. Stalder hat mich angegriffen <- urs blum

On the mainframe there are many software modules that warn people from risking their lives or their health. Unfortunately some people wrote a generic algorithm, that rewrites things like "don't touch that" to "touch it now, touch it fast" or "stop here" to "continue fast". So people would get hurt by the security software that should prevent that they get hurt. The same thin like someone would stick a "good medicine" sticker over a biohazard sticker. We should add additional algorithms that prevent such modifications. Possibly it is also just a second system that evaluates the "WARNING" message and then takes over the Human-BOs, Stimmociver, Neuralink ... after one found such a malware they often sell it as feature to train students, not considering what such a malware could cause harm or even kill innocent kids

hypocrisy

People often know, that if they say the direct opposite of the things they should not have done. As a 6 year old boy I already knew that if I say the direct opposite of what I have done the chances are big, that the parents will not think about that what I actually have done. Kids fear the pain physical violence or psychological violence does to them, so it prefers to lie. So it is also bad to throw with apples (in metaphysic manner, sins) because children do not understand why this could make sense. When I was about 10 years I had to draw a filigree in school and I took a medium brush. The teacher saw that and told me (cynic) why don't you take a thicker brush, so the 10 year old Marc went to the brushes and took a thicker brush.... TRUE
